A Computer Science enthusiast and self-taught developer looking forward to be part of a reputed company for the role of developer. I have worked for Tata consultancy service as system analyst. A quick learner when it comes to software development. Constantly trying to improve myself, I am currently learning and building projects with the help of new technologies like React.js and Node.js.

Technologies and Languages

- React, Node, Express, Javascript, CSS, HTML
- MongoDB, Git, GitHub

PROJECTS

Upload your Book – website
- A beginner level project which has the functionality that users can advertise their new book by uploading to the website, users can login, search for books, add comments, basic CRUD functionalities are added.
- Built using EJS webframework, Node Js, Express, Mongoose, MongoDB, HTML, CSS and external libraries, packages are used.

Med delivery - Website
- Abeginner level project which has functionalities that users can by medical products from the website.
- Website built using React, Node Js, Express, Mongoose, MongoDB, HTML, CSS and external libraries, packages are used.

Color changer game
- Basic project created using html, css . The project based on DOM manipulation to achieve the functionality.
